

EHR Easy Access

Challenge

Vehicles used for Telehealth, VRI (Video Remote Interpreting) and EHR Access typically utilize different carts. Each one needs to be stored, moved into position and are separate investments. This wastes time, uses up floor space, increases cost-of-care, increases cost of training, maintaining & managing different carts.

Solution

The EHR Easy Access is a **non-powered, easy to push-and-position, multi-functional** vehicle that supports EHR Data Entry, Telehealth and VRI. It is powered by an all-in-one medical grade monitor and can also run a separate brick CPU to a regular monitor of any size.

Benefits

Powered by an all-in-one medical grade monitor

- Saves time, space and improves accessory security.
- Eliminates unnecessary equipment, cord routing issues and reduces trouble-shooting calls.
- Distinctive, elegant design and uncommon price-point coupled with its lightweight functionality make it an all-in-one cart of choice.
