

Virtual Patient Registration Assistant

Challenge

Efficient/accurate patient registration has always contributed to patient satisfaction and a positive health care experience. Recent challenges introduced by COVID-19 and subsequent surges have emphasized the need to rapidly register patients in a safe manor while minimizing exposure to the virus. How can we more efficiently and safely get patients registered? How can we quickly bring patient registration capability to temporary tents or other locations? How can we workload balance across resources who assist with patient registration?

Solution

Tryten's Virtual Patient Registration Assistant is a professional grade, mobile tablet cart that:

- Is light weight and easily positioned to support entry of patient information.
- Is available with either VESA mount or adjustable slides to accommodate your tablet.
- Can support your tablet-based video or EHR software.
- Can be incorporated into a 'call center' type approach to patient registration.
- Can also be used for other application when needed like Virtual Remote Interpreting or telehealth.
- Can be adapted to accommodate protective tablet shadow boxes or card scanning equipment.
- ISO certified.
- 5 year Warranty.

Benefits

Healthcare organizations can utilize the Tryten Virtual Patient Registration Assistant to:

- Quickly bring patient registration to new locations as needed.
- Safely gather patient information with fewer resources in direct contact with the patient.
- **Efficiently process the patient utilizing call center remote staff** to help patient get registered.
- **Assist in afterhours patient registration** by using an offsite staff member to support registration over video enabled support.
- Help bring your tablet-based applications to point-of-care with less interference with local delivery of care.
